PROFESSIONAL SUMMARY

Product Manager for a B2B AI-graded oral assessment platform used by universities to check comprehension behind written coursework. Computer Science, Statistics and Economics background. Define model release criteria with engineers, contribute to model and application development directly, and run technical discovery with non-technical buyers.

CORE COMPETENCIES AND SKILLS

Product: Customer discovery & user interviews, requirements definition (user stories, acceptance criteria), product roadmap & sprint prioritization, backlog triage, scoping & tradeoff analysis, launch and onboarding, Agile/Scrum, Jira.

Data & Analytics: SQL (PostgreSQL), NoSQL (MongoDB), A/B testing, Pandas, NumPy, Google Analytics.

Technical Proficiency: Full-Stack Development (JS, React, Node.js), Machine Learning (Scikit-learn), ETL, REST APIs, AWS Cloud Infrastructure, Git, Docker.

EMPLOYMENT HISTORY

Product Manager | *The Bright Doctor* 09/2025 – Present

- **Owned an AI-native oral assessment product end to end** — discovery, scoping, prototype, launch, onboarding — across 5 institutions and 9 instructors, covering over 1,000 graded assessments per term.
- Cut dynamic follow-up questions from the launch spec after discovery showed instructors valued predictable, consistent question sets over adaptive depth; **the simpler flow shipped 2 weeks earlier**.
- Scoped a **rehearsed-vs-spontaneous speech classifier** — the product's defense against exam takers reading AI-generated answers aloud. Trained on labelled B2C admissions-prep audio, **reaching 0.91 AUC**, and set a precision-first flagging threshold to keep instructor review load manageable.
- Led **technical discovery** across B2B sales cycles, translating platform architecture into instructional and operational outcomes for non-technical educators; supported 6 deals, **5 closed**.
- Consolidated recurring customer objections and support themes into a **prioritized backlog** for a cross-functional team of 4, arbitrating scope against engineering capacity; **7 consecutive milestones** on time.
- Specified and shipped internal sales automation that streamlined the project data pipeline, surfacing lead status and customer insight to the team and **cutting manual data entry by 8+ hours weekly**.

Independent Solutions Consultant | *Logistics & Tourism SMB Clients* 06/2024 – 08/2025

- Sole technical partner to 3 owner-operator clients: ran requirements discovery, defined scope and success metrics, then built and shipped the platform. Delivered **400+ new monthly users** and a **32% increase in service inquiries** across engagements.
- Pushed clients toward integrated booking and CMS ahead of the cosmetic redesign they had asked for, after discovery indicated inbound inquiries were being lost to manual scheduling; the reprioritization resulted in **43 new paying customers and 8 return customers**.
- Set technical direction and reviewed work for junior developers on multi-person engagements.

Sales Associate | *Berry's Bait & Tackle Ltd* 04/2019 – 09/2020

- Translated complex equipment specifications into clear, benefit-driven value propositions, **consistently exceeding monthly sales targets**.

EDUCATION AND CERTIFICATIONS

B.Sc. Computer Science, Statistics and Economics | University of Toronto, St. George 09/2020 – 06/2025

- Coursework: Machine Learning, Data Analysis, Computational Statistics, Statistical Theory, Databases, Algorithms, Web Development, Econometrics, Financial Economics.

Certifications: Google Project Management Professional · Machine Learning Specialization (Coursera, 2026)

LANGUAGES

Fluent in English and Mandarin · **Intermediate French**
